Art Unit: 1774

DETAILED ACTION

1. Examiner regrets the untimely reopening of prosecution.

- 2. Applicant's amendment and accompanying remarks filed December 2, 2004 have been acknowledged.
- 3. Examiner acknowledges amended claims 1 and 22.
- 4. Examiner acknowledges cancelled claim 13.
- 5. The rejection of claims 1-4, 6-7, 10-12, 14 and 18 under 35 U.S.C. 102(b) as being anticipated by Caudill, Jr., U.S. Patent Number 4,541,885 is withdrawn due to applicant's amended claim 1.

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. Claims 1-4, 6-7, 11-12, 18-19, 22, 24-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Caudill, Jr., U.S. Patent Number 4,541,885.

Caudill teaches an interior component for an automobile that comprises a cover layer that is applied over a two-layer foam laminate as per instant claim 1 (see column 2, lines 30-41). The reference also discloses that component comprises an intermediate layer that is a thin, flexible polyurethane foam (see column 1, lines 35-40 and column 2, lines 35-40). Additionally, the

Application/Control Number: 09/808,243 Page 3

Art Unit: 1774

reference discloses upper and lower foam (polyurethane) panels as per instant claims 1 and 11-12 (see Figure 2 and column 2, lines 18-29). It is also disclosed in the reference that the cover layer is a decorative layer as per instant claim 1 (see column 2, lines 30-40). Figure 2 of the reference discloses that the upper and lower foam panels are interconnected along their whole area of contact and that the upper foam panel has a smaller lateral dimension than the lower foam panel as per instant claims 2 and 6. Also, figure 2 of the reference discloses that the upper and lower foam panels have different material thicknesses as per instant claim 3. Claims 1, 7 and 18 are product-by-process claims. Even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior art was made by a different process. The manner in which the foam panels bonded together does not make the component of the Caudill reference different from applicant's component. Both Caudill and applicant have upper and lower foam panels that are bonded together. The Caudill component is the same as applicant's. As for instant claim 22, the limitation "inside roof lining" goes to intended use and is given little patentable weight in a product claim. In response to applicant's argument that, a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. See In re Casey, 152 USPQ 235 (CCPA 1967) and In re Otto, 136 USPQ 458, 459

Application/Control Number: 09/808,243

Art Unit: 1774

(CCPA 1963). The reference does not disclose the flexural strength of the support layer or the porosity of the upper and lower foam layers. In Caudill, the support layer comprises the upper and lower foam layers. The porosity of the foam layers affects the absorption of sound. Additionally, it would be obvious to one of ordinary skill in the art that the flexural strength of the support layer (upper and lower foam panel) would be greater than the decorative layer and the intermediate layer being that there are two foam panel which make up the support panel. It would have been obvious to one of ordinary skill in the art to have the upper and lower foam panel have different porosities in order to provide sound absorption.

Claims 5, 8-10, 14, 15-17 and 20-21 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The prior art does not provide for the recited interior lining component further including a reinforcing mat and cover fleece.

- 8. Claim 23 is allowed. The prior art does not provide for an inside roof lining for a vehicle, the roof lining:
 - at least one decorative layer forming a facing of the roof lining;
 - an intermediate layer covered by the decorative layer, the intermediate layer including a cushioning layer;
 - a first reinforcing mat disposed above the intermediate layer, the reinforcing layer comprising fibers;
 - a support layer disposed above the first reinforcing layer, the support layer including

Page 5 Application/Control Number: 09/808,243

Art Unit: 1774

lower foam panel, an upper foam panel and an adhesive layer disposed between the foam panels for interconnecting the foam panels together, each foam layer comprising polyurethane; and

a second reinforcing mat disposed above the support layer, the second reinforcing mat comprising fibers.

Response to Arguments

9. Applicant's arguments with respect to claims 1-4, 6-7, 10-12, 14 and 18 have been considered but are most in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communication from the examiner should be directed to Camie S. Thompson whose telephone number is (571) 272-1530. The examiner can normally be reached on Monday through Friday from 7:30 am to 4:00 pm. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rena L Dye, can be reached at (571) 272-3186. The fax phone number for the Group is (703) 872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
